Cyber Crime Laws and Computer Forensics Training Course (CCFC)

As the number of computer crimes; such as, defamation on social media, e.g. facebook, twitter, hacking, infringement of intellectual property rights on internet, has substantially increased in every year. It is necessary for all corporate entities, security specialists, law enforcement officers, or lawyers, to know the nature of those crimes and how to tackle the problems when it arises.

P333 is a pioneer firm, dealing in computer crimes, computer forensics and related IT security. We provide both legal and IT services for all business entities, which need advice and suggestion to solve their problems. We view that providing knowledge to the persons involved is the key factor. Therefore, we designed the Cyber Crime Laws and Computer Forensics Training Course (CCFC) aiming to help people involved to have a better understanding on this particular issue. Our program comprises lecturing on technical and legal knowledge, focusing on computer forensics workshop (regarding mobile phone forensics and trace route of cyber perpetrator via P2P and new advanced technology, application of computer laws in technical field and tools for accumulating all e-evidence (such as domain name, IP address, proxy location, etc.) to be used in the court . The honorable lecturers include, among others, senior judges, prosecutors, DSI, policemen, experienced lawyers and skillful computer forensics examiner.

This exclusive and intensive course and limited only 30 attendants. Early bird reservation is recommended before February 10, 2012.
